

## Workshop on Surface Engineering and Functional Materials

Going on with the Workshops that are happening week-by-week, is time to brief you the 2nd workshop about Surface Engineering and Functional Materials (that occurred in 17th October). The first part of the presentation was focused in technologies for surface engineering that will exist in CeNTI and its respective capabilities. The range of technologies is large and, for this reason, some examples were giving, respecting the synergy between processes and the incorporation of (nano)functional materials. The second part was to give attention to the relation between functional materials and functionalities that can be achieved in textile substrates.
