

Electrical fashion

Have you ever thought a particular piece of clothing gave you a special feeling, a sort of ‘click’; able to boost your power for the daily activities?

Well, that may soon have a literal meaning. Scientists from Georgia Institute of Technology have devised a sort of brush-like fibres that generate energy from movement.

If used to create smart clothing, these fibres may allow to harness body movement to power electronic gadgets...offering a potential new meaning for the expression ‘powerful clothing’.
