

Projects

CeNTI's role is to help industry bring products and innovations to market quickly, by offering unique expertise in materials development. Usually our projects take a multi-disciplinary approach and includes technologists and researchers working in:

- materials formulation, development and validation
- process development
- systems prototyping
- application development and validation

CeNTI's role is to drive new materials in order to contribute for product or innovation through all the necessary stages of development. Our service is comprehensive and integrated: the breadth of our experience means we can help customers take all the steps on the path from concept to profitable product. CeNTI has strict protocols to protect client confidentiality and intellectual property.
